

Acoustic Phonetics

Analysing a Communication Medium

Dafydd Gibbon

Guangzhou, Autumn 2019

Conclusion

After studying this unit ...

... you should know the basic semiotic and physical foundations on which rhythms and melodies of speech are based

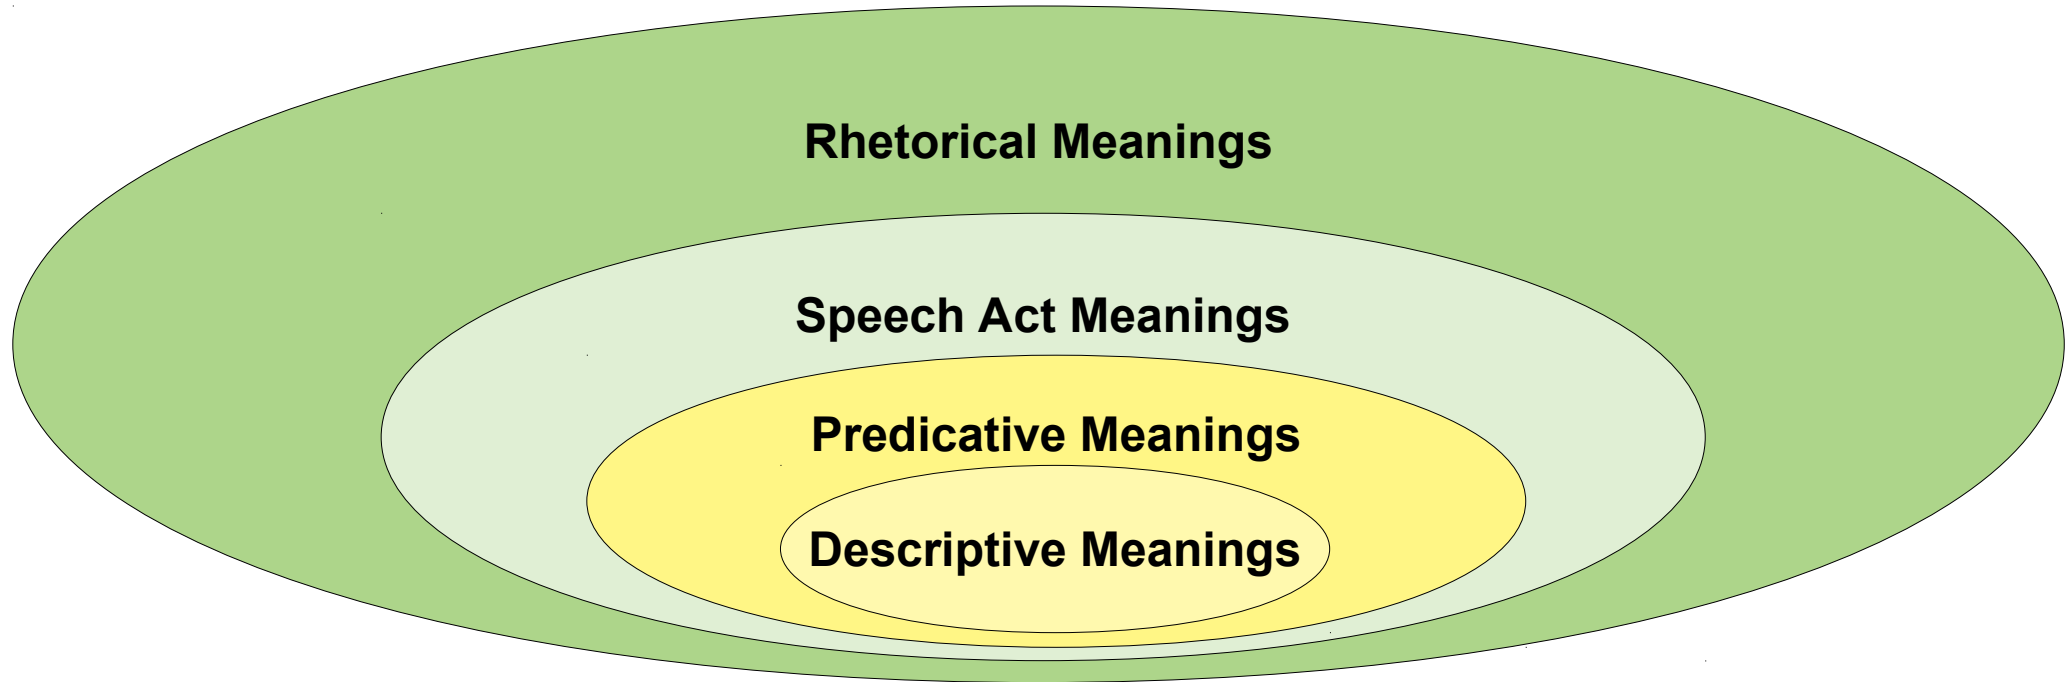

Communication Basics

- Semiotics: the study of signs and their meanings
 - Index: signifies something with a particular time, place or cause
 - Icon: signifies something which is similar to itself
 - Symbol: signifies something which is independent of its appearance, place, time or causal influence

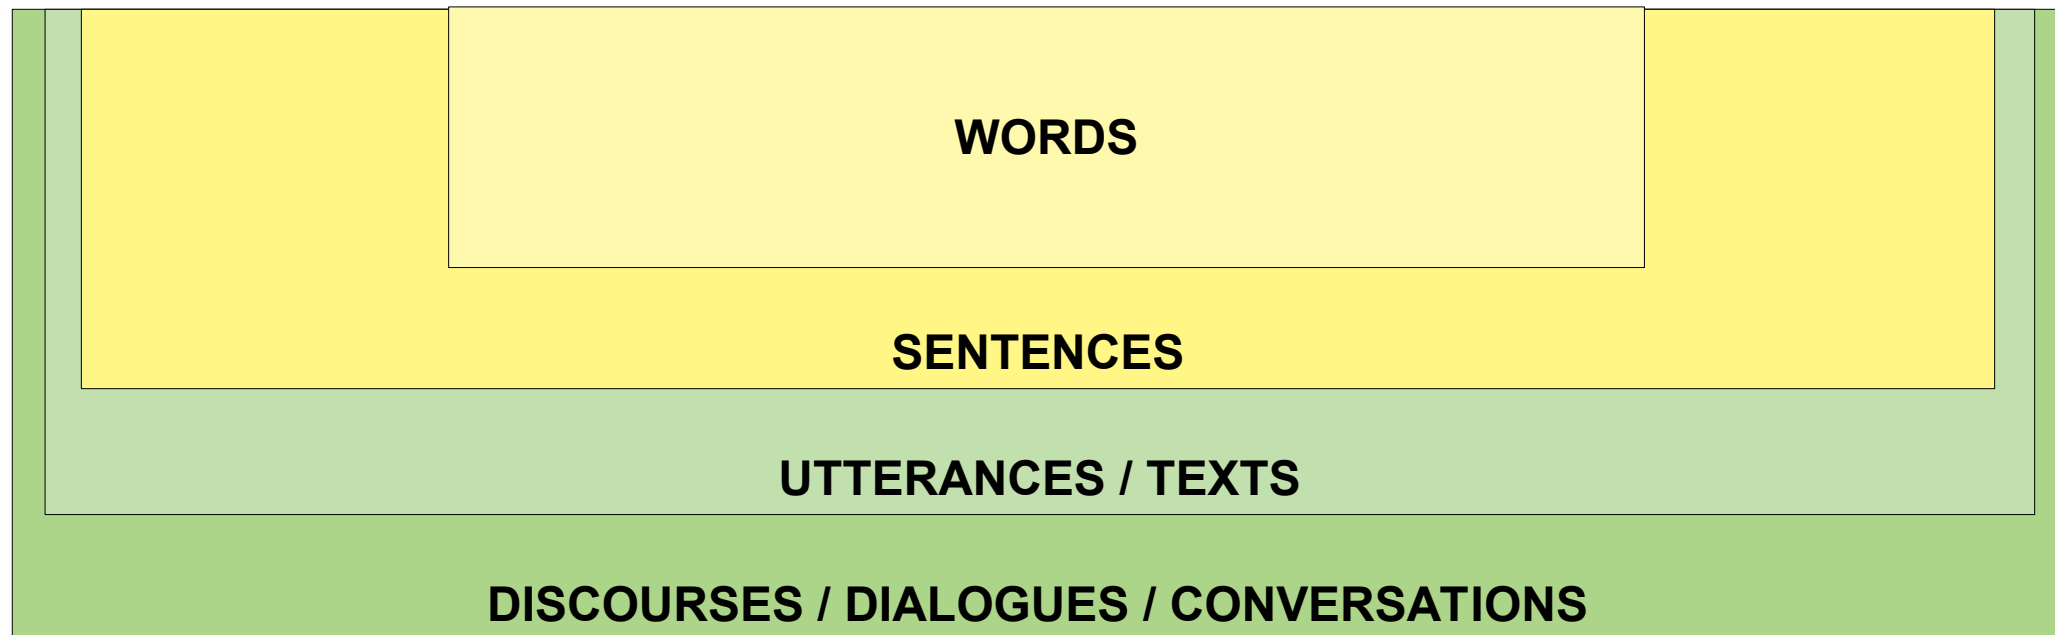

Traffic signs:
Index

PHONETICS

The Phonetic Cycle

- The Articulatory Domain (Articulatory Phonetics)
 - The IPA (A = Alphabet / Association)
 - The Source-Filter Model of Speech Production
- The Acoustic Domain (Acoustic Phonetics)
 - The Time Domain: the Speech Wave-Form
 - The Frequency Domain: simple & complex signals
 - Fourier Analysis: the Spectrum
 - Pitch extraction
 - Analog-to-Digital (A/D) Conversion
- The Auditory Domain (Auditory Phonetics)
 - Anatomy and Physiology of the Ear

The Methods of Phonetics

- Empirical Methods
 - Direct observation (“impressionistic”), usually based on articulatory phonetic criteria
 - Measurement
 - position and movement of articulatory organs
 - the structure of speech signals
 - mechanisms of the ear and perception in hearing
- Formal Methods
 - Statistical evaluation of direct observation and measurements
 - Creation of formal models of production, transmission and perception

The Domains of Phonetics: the Phonetic Cycle

A tiger and a mouse were walking in a field

Acoustic
Phonetics

Summary – Phonetic Domains

- Define each of the following:
 - articulatory phonetics?
 - acoustic phonetics?
 - auditory phonetics?
- Which parts of the head are they associated with?
- What is the “phonetic cycle”?

Articulatory Phonetics (Speech Production)

The articulatory domain

- Domain of speech production
- Articulatory organs are relatively easily observable
- Domain of reference for phonetic categories of the IPA
- Investigated via
 - corpus creation
 - experiment paradigm

The IPA (A = Alphabet / Association)

THE INTERNATIONAL PHONETIC ALPHABET (revised to 1993)

CONSONANTS (PULMONIC)

	Bilabial	Labiodental	Dental	Alveolar	Postalveolar	Retroflex	Palatal	Velar	Uvular	Pharyngeal	Glottal
Plosive	p b			t d			ʈ ɖ	k ɡ	q ɢ		ʔ
Nasal	m	ɱ		n			ɲ	ŋ	ɴ		
Trill	ʙ								ʀ		
Tap or Flap				ɾ				ɽ			
Fricative	ɸ β	f v	θ ð	s z	ʃ ʒ	ʂ ʐ	ç ʝ	x ɣ	χ ʁ	ħ ʕ	h ɦ
Lateral fricative				ɬ ɮ							
Approximant				ɹ			j	ɰ			
Lateral approximant				l			ʎ	ʟ			

- transcription of the phonemes of all languages of the world
- phoneme:

THE INTERNATIONAL PHONETIC ALPHABET (revised to 1993)

CONSONANTS (PULMONIC)

	Bilabial	Labiodental	Dental	Alveolar	Postalveolar	Retroflex	Palatal	Velar	Uvular	Pharyngeal	Glottal
Plosive	p b			t d		ʈ ɖ	c ɟ	k ɡ	q ɢ		ʔ
Nasal	m	ɱ		n			ɲ	ŋ	ɴ		
Trill	ʙ								ʀ		
Tap or Flap				ɾ				ɽ			
Fricative	ɸ β	f v	θ ð	s z	ʃ ʒ	ʂ ʐ	ç ʝ	x ɣ	χ ʁ	ħ ʕ	h ɦ
Lateral fricative				ɬ ɮ							
Approximant				ɹ			j	ɰ			
Lateral approximant				l			ʎ	ʟ			

Where symbols appear in pairs, the one to the right represents a voiced consonant. Shaded areas denote articulations judged impossible.

CONSONANTS (NON-PULMONIC)

	Bilabial	Dental/alveolar	Palatal	Velar	Uvular
Clicks	ɸ ɓ				
Voiced implosives	ɓ				
Ejectives	ɛ̥				

SUPRASEGMENTALS

	Primary stress	Secondary stress	Long	High	Low	Extra low	Upstep	Global rise	Global fall
Primary stress	ˈ								
Secondary stress	ˌ								
Long	ː								
High	˥								
Low	˦								
Extra low	˧								
Upstep	˥̥								
Global rise	˦̎								
Global fall	˨̎								

CONSONANTS (NON-PULMONIC)

	Bilabial	Dental/alveolar	Palatal	Velar	Uvular
Clicks	ɸ ɓ				
Voiced implosives	ɓ				
Ejectives	ɛ̥				

SUPRASEGMENTALS

	Primary stress	Secondary stress	Long	Half-long	Extra-short	Syllable break	Minor (foot) group	Major (intonation) group	Linking (absence of a break)
Primary stress	ˈ								
Secondary stress	ˌ								
Long	ː								
Half-long	ˑ								
Extra-short	ˑ̥								
Syllable break	ˑ̤								
Minor (foot) group	ˑ̤̎								
Major (intonation) group	ˑ̤̎̎								
Linking (absence of a break)	ˑ̤̎̎̎								

VOWELS

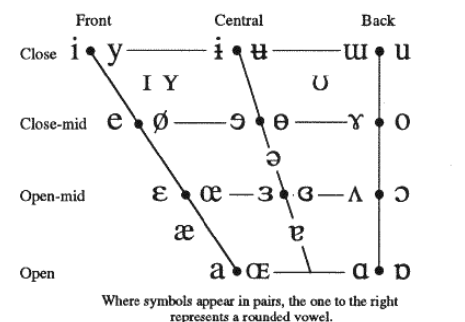

OTHER SYMBOLS

ɱ	Voiced labial-velar fricative	ç ʝ	Alveolo-palatal fricatives
ʋ	Voiced labial-velar approximant	ɹ	Alveolar lateral flap
ɰ	Voiced labial-palatal approximant	ɻ	Simultaneous ʃ and ʒ
ħ	Voiced epiglottal fricative	ɻ̥	Lowered
ʕ	Voiced epiglottal fricative	ɻ̥̎	Advanced Tongue Root
ʡ	Epiglottal plosive	ɻ̥̎̎	Retracted Tongue Root

- vowels are the main factors in rhythm and melody

VOWELS

OTHER SYMBOLS

ɱ	Voiced labial-velar fricative	ç ʝ	Alveolo-palatal fricatives
ʋ	Voiced labial-velar approximant	ɹ	Alveolar lateral flap
ɰ	Voiced labial-palatal approximant	ɻ	Simultaneous ʃ and ʒ
ħ	Voiced epiglottal fricative	ɻ̥	Lowered
ʕ	Voiced epiglottal fricative	ɻ̥̎	Advanced Tongue Root
ʡ	Epiglottal plosive	ɻ̥̎̎	Retracted Tongue Root

Affricates and double articulations can be represented by two symbols joined by a tie bar if necessary.

The Source-Filter Model of Speech Production

- A “model” is a simplified representation of relevant features of reality (it also adds its own artefacts)
- In the **Source-Filter Model** of speech production, the sound is generated by the **SOURCE** and modified by the **FILTER**
- Two types of **source**:
 - Larynx: melody (tone, intonation)
 - Narrowing / closing of the mouth (noisy consonants)
- Three types of **filter**:
 - the PHARYNGEAL CAVITY (throat)
 - the ORAL CAVITY (mouth)
 - the NASAL CAVITY (nose)

The Source-Filter Model of Speech Production

The Source-Filter Model of Speech Production

Summary: Articulatory Phonetics

- Which are the main articulators involved in
 - vowel production?
 - consonant production?
 - tone production?
- Produce these consonants, followed by the vowel [a]:
 - voiceless bilabial fricative
 - voiced palatal stop
 - voiceless labial-velar stop
 - implosive velar stop
 - velar nasal
- What is the source-filter model?
 - Illustrate this, referring to the difference in sound between speaking in a tiled bathroom and in the open air.

Acoustic Phonetics (Speech Transmission)

The acoustic domain

- **Acoustic phonetics** is concerned with investigating the **transmission** of speech signals through
 - gases such as air, other substances (e.g. bone, tissue)
 - electronic amplification and storage
- The basic **parameters** of the speech signals are
 - **Amplitude** → **energy, intensity, loudness**
 - **Frequency** → **melody, pitch: tone, intonation**
 - **Time** → **duration, rhythm**
- The **methods** used to analyse speech signals are:
 - observation, transcription, description by a trained phonetician
 - analog-to-digital (A/D) conversion
 - mathematical definitions of filters and transformations

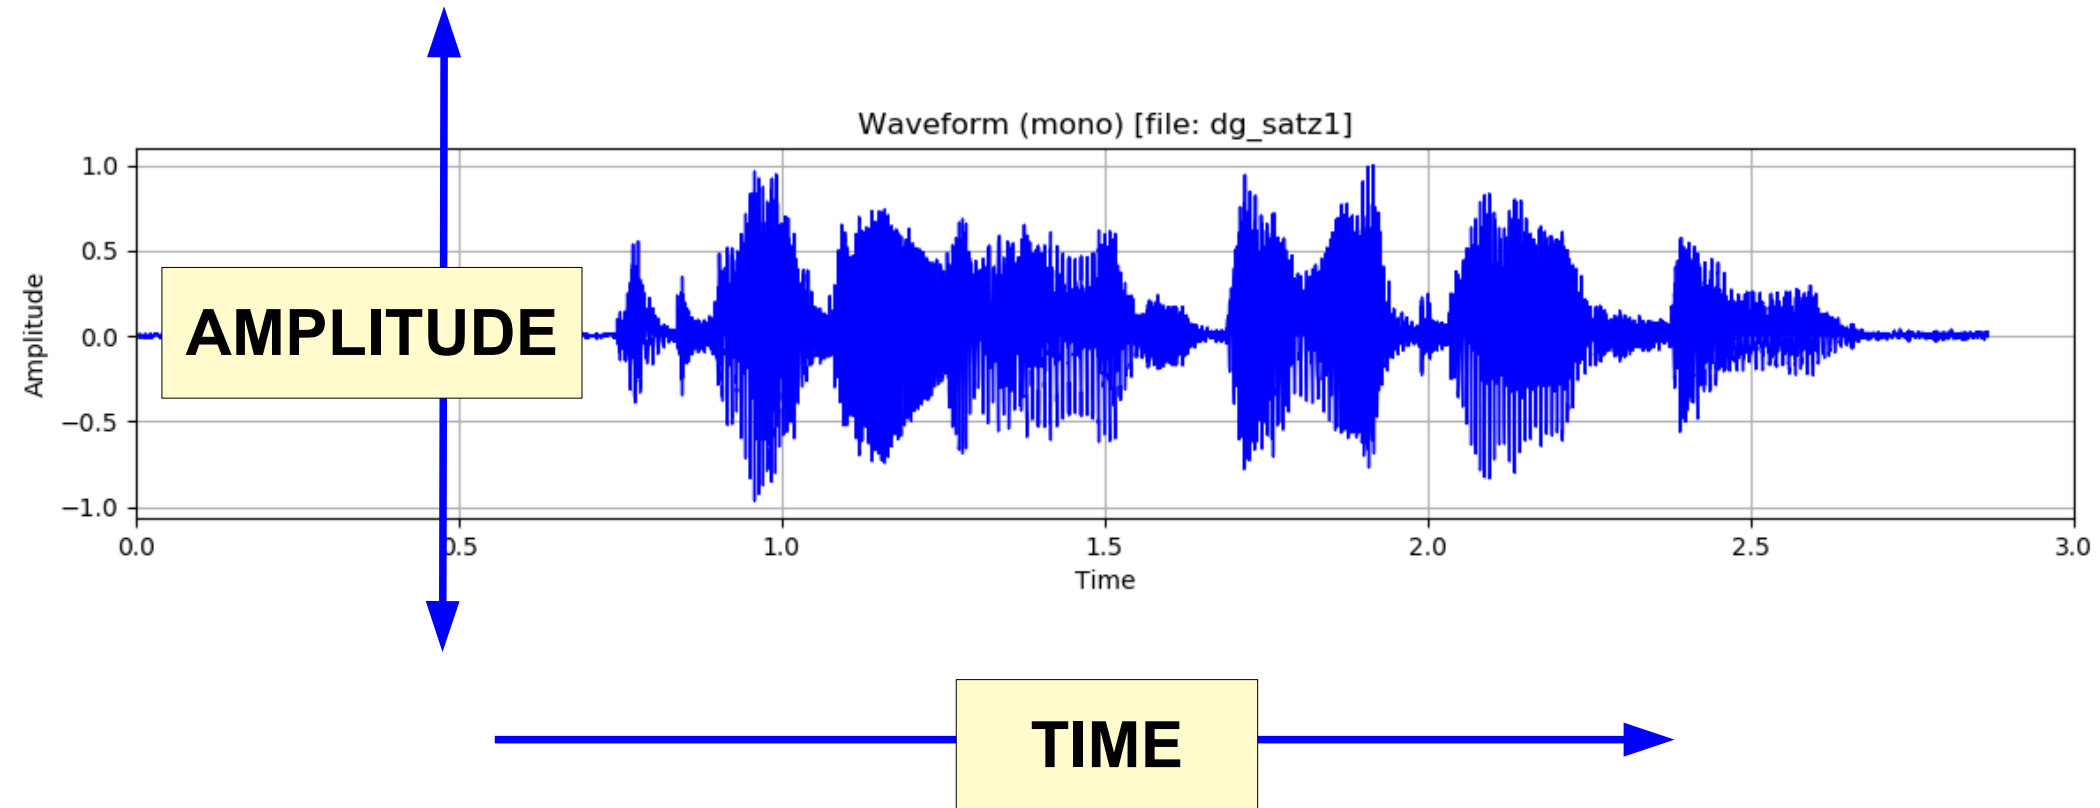

The Speech Wave-Form

- Speech is transmitted through air (and other substances) as a regular wave of pressure changes:

- The changes in air pressure
 - can be heard
 - can be measured (like the waves on the ocean)
 - the measurements can be visualised and used for calculating statistical models of the structure of speech

Basic Speech Signal Parameters

The Time Domain: the Speech Wave-Form

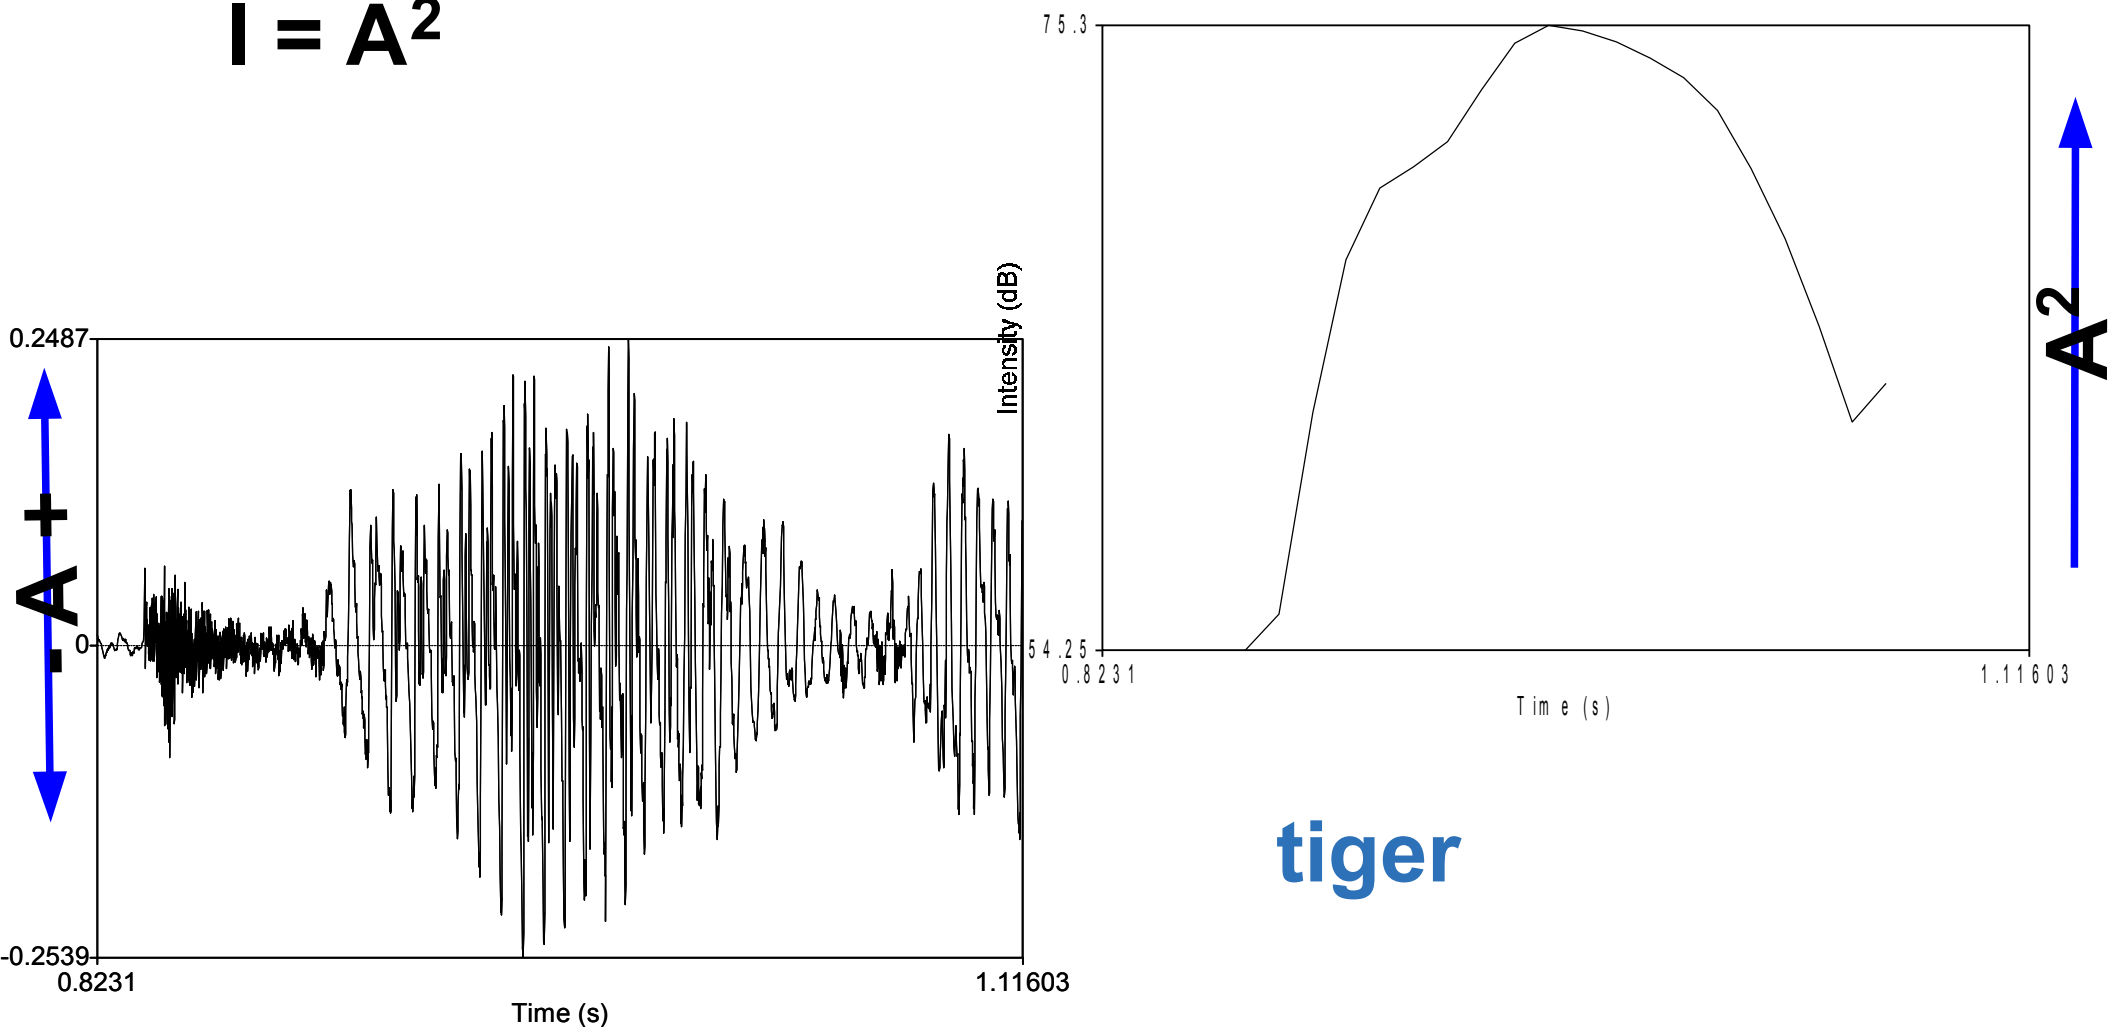

Positive or negative amplitude A of the speech signal:

Derived parameter *INTENSITY*

- The *intensity* of the speech signal at any given point in time is the *square of the amplitude* of the wave from zero at this point in time:

$$I = A^2$$

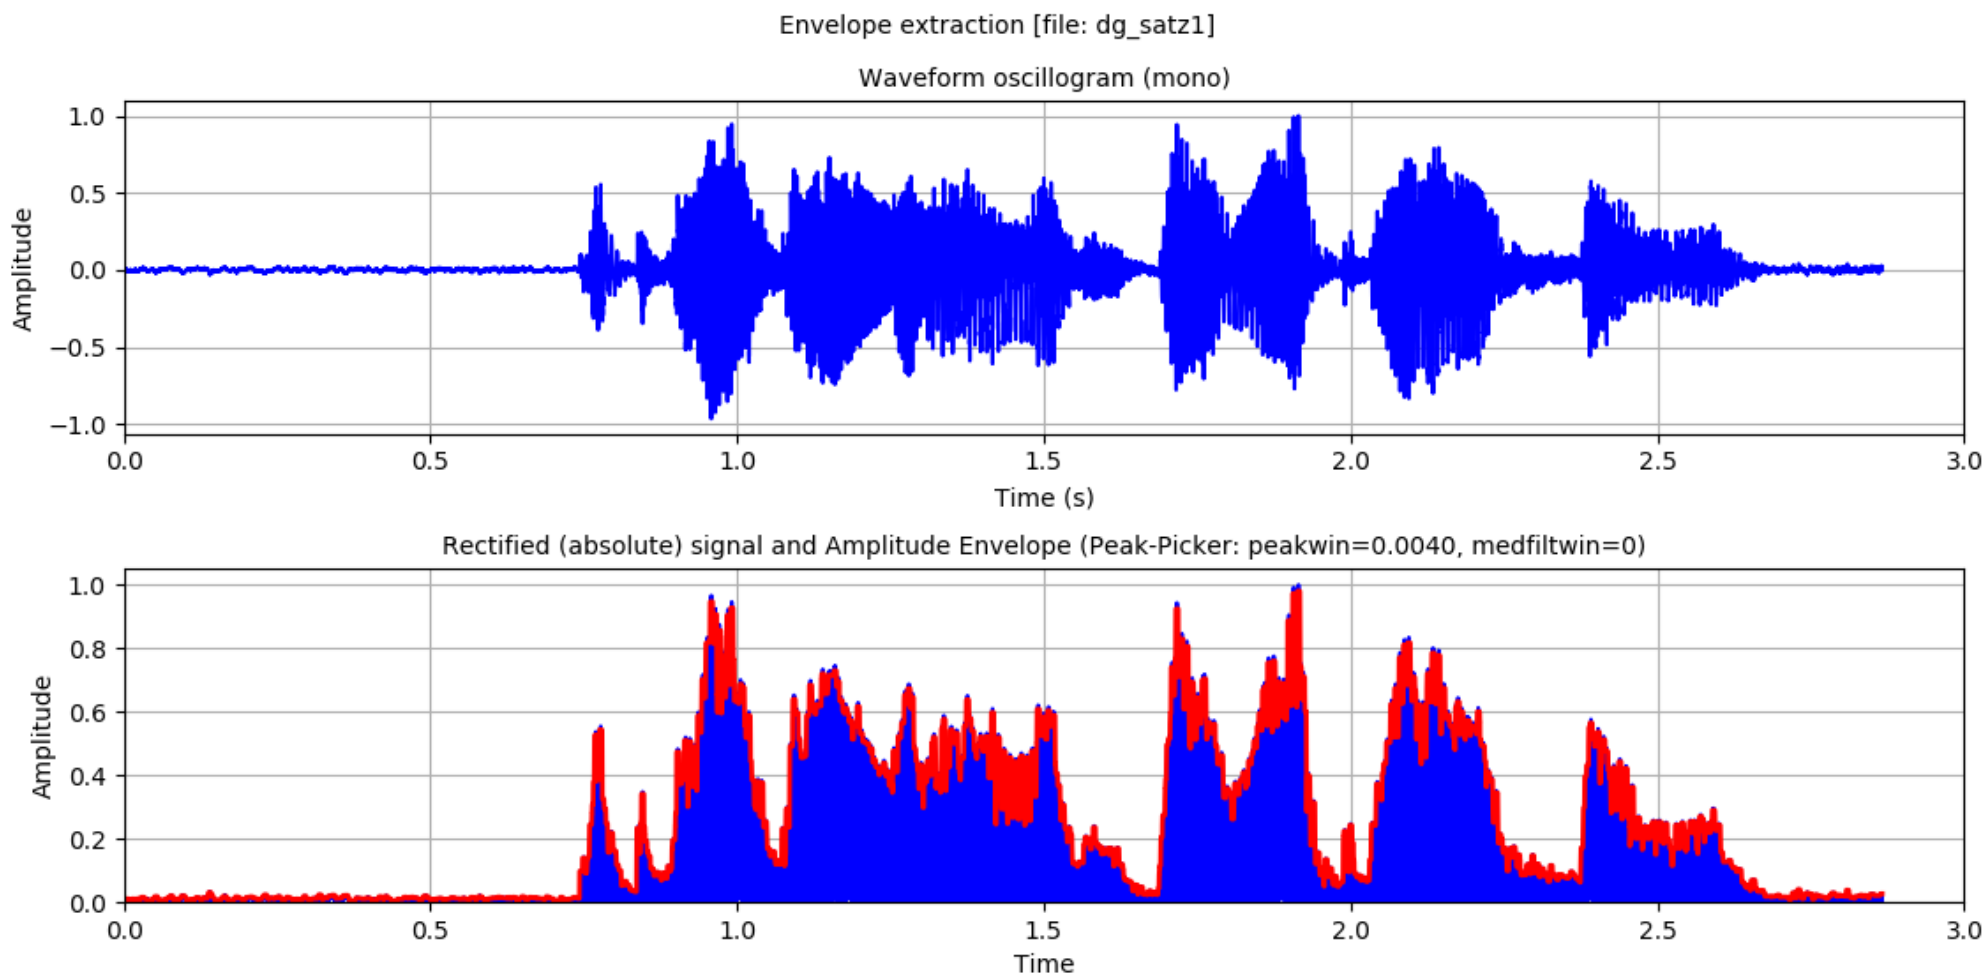

Derived parameter *ENERGY*

- The energy E (root-mean-square energy) is
 - the square root of the mean of a sequence of intensity values I_1, \dots, I_n (remember: intensity is amplitude squared)

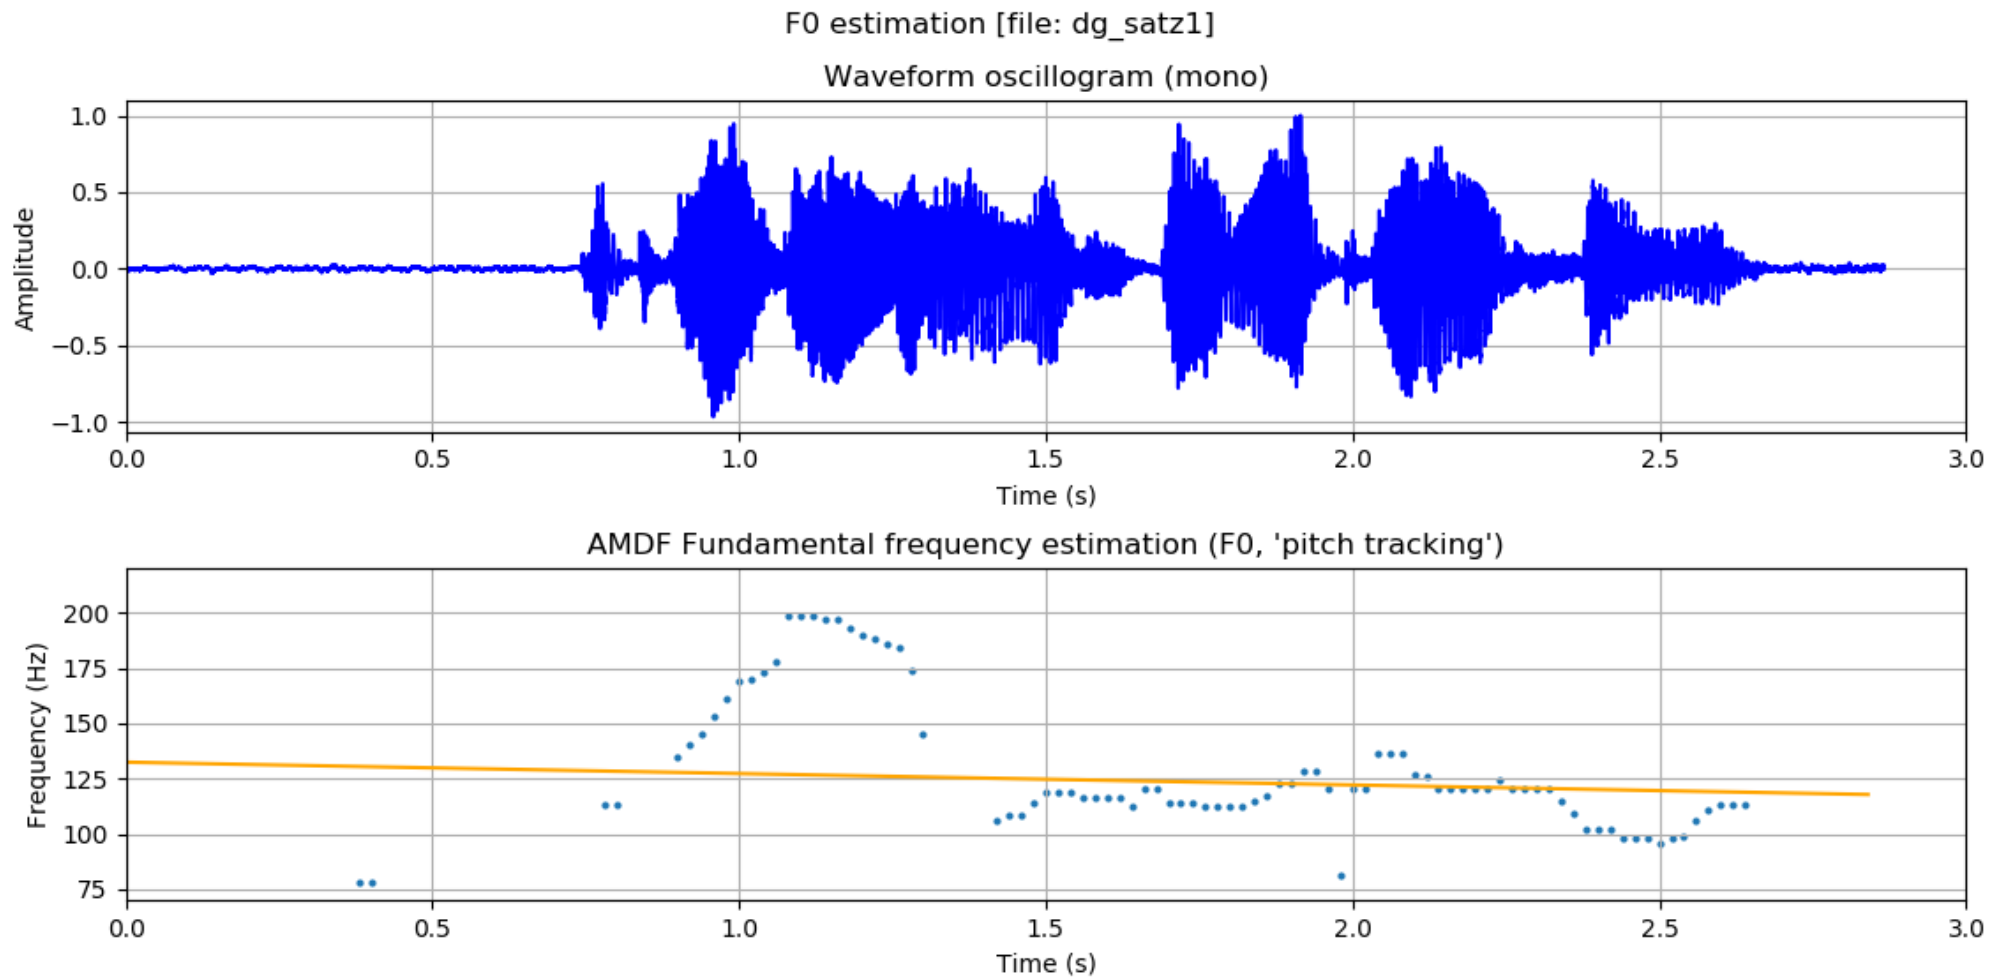

$$E = \sqrt{\frac{\sum_{i=1 \dots n} A(x_i)^2}{n}}$$

- Energy is intensity averaged over time
 - In fact, intensity measurements are, in practice, energy measurements over very short periods of time
- Compare other measurement units per time unit:
 - miles per hour
 - kilowatts per hour

The Time Domain: the Speech Wave-Form

The Time Domain: the Fundamental Frequency

Time and Frequency Domains: the Spectrogram

Spectrogram [file: dg_satz1]

Waveform oscillogram (mono)

Spectrogram (spectrum sequence)

Time and Frequency Domains: the Spectrogram

Spectrogram [file: dg_satz1]

Waveform oscillogram (mono)

Spectrogram (spectrum sequence)

Four Acoustic Phonetic Visualisations

... almost all you need to know about the rhythms and melodies of speech ...

Summary: Acoustic Phonetics

- What are the basic parameters of the speech signal?
- Define the following terms:
 - amplitude
 - intensity
 - energy
- How are time-domain representations of speech signal converted to frequency domain representations?
- Define the following terms:
 - Spectrum, spectrogram
 - fundamental frequency, F0, pitch
 - harmonic
 - formant
 - analog-to-digital conversion

Auditory Phonetics (Speech Perception)

The Auditory Domain: Anatomy of the Ear

The Auditory Domain: Anatomy of the Ear

outer ear

inner ear

middle ear

The Auditory Domain: Anatomy of the Ear

microphone

amplifier

Fourier transform

outer ear

inner ear

middle ear

Summary: Auditory Phonetics

- What are the functions of
 - the outer ear?
 - the middle ear?
 - the inner ear?
- What are
 - the ossicles?
 - the oval window?
 - the cochlea?
 - the basilar membrane?

Conclusion

After studying this unit ...

... you should know the basic semiotic and physical foundations on which rhythms and melodies of speech are based
